Zedmed Version 33.8 (Reed Warbler) Release Notes

System Requirements

For the upgrade to be successful:

1. The .Net Runtime 4.7.2 is required on the server
2. The site (clinic or hospital) must be running on Zedmed Version 26.0 or later.
3. If the clinic is on V28 or prior and uses a Jayex kiosk or HotDoc, additional steps will need to be carried out post-upgrade, update the CRS_App_Server.ini as shown below to switch on the Rest API:
   [OfficeHIService]
   RunRestService=Yes

   Once the INI file is updated please restart the Zedmed Office HI service.
4. If the clinic is using MIMS, need to use MIMS January 2021 issue and above.

Release Summary

Version 33.8 Highlights

Allow retransmission of immunisations to AIR

1. Immunisations that have their dose or batch number updated are now included in the pending items to upload to AIR. Clicking on the Transmit Pending to AIR button in the AIR module in Office will transmit the changes to AIR.
2. The AIR module in Office also now supports force-retransmitting an immunisation to AIR. Select which immunisations you would like to resend, right click and select "Retransmit".
3. The AIR module in Office now supports multi-select. You can use CTRL+Left mouse button or SHIFT+Left mouse button to select multiple immunisations to do operations on.
4. You can now right click on a immunisation in the patient's immunisation list in Clinical and switch between sending and not sending the immunisation to AIR.

Enhancements and Bug Fixes

Component	Key	Release Notes
Batch Letter Writer	ZED-5446	Fixed the letter writer/editor so that it does not open a blank letter when there is an error, including SOAP error.
Batch Letter Writer	ZED-5454	Cancelled appointments are now hidden from the Batch Letter Writer search results by default. Added a checkbox to show them (with date/time struck out) if required.
Batch Letter Writer	ZED-1281	Fixed Access Violation when inserting an Observation Graph in Batch Letter Writer.

Prescribing	ZED-5543	Fixed an issue where patient medication sheets were printing with brand information instead of active ingredient information.
Prescribing	ZED-5554	Editing branded drug recorded before the start of Active Ingredient Prescribing now correctly creates a new branded drug record that conforms to Active Ingredient Prescribing.
Clinical	ZED-5458	Fixed issue where recreating a recently deleted Auto Text entry in Clinical failed unless Clinical was restarted.
Immunisation	ZED-5464	Fixed issue where non-scheduled child immunisations could not be modified due to the doctor name missing from the doctor field.
Patient Search	ZED-5578	Fixed issue when searching patients by D.O.B in Clinical on typing the month 08 the cursor does not move to the YYYY part of the date.
Clinical	ZED-5583	Output PIT file that does not have actual collected date no longer has an incorrect date, the date field will be left empty/blank.
Referral Letter	ZED-5586	Fixed issue when adding the "Incoming documents" merge field to a referral letter in Clinical, it does not display a window to allow you to select which document(s) will be inserted.
Referral Letter	ZED-5658	Add health fund details to available merge fields in Clinical's letter writer.
Office	ZED-2810	Appointment Report CSV output now has the following details added: Added Health Fund Name, Member Number, Name on Card and Expiry Date.
Office	ZED-3231	Added Printer Setup functionality onto Fast Reports preview.
Office	ZED-5119	Added last run date back to the ERA report screen as in earlier versions. Note that it is now global for the practice rather than machine specific.
Office	ZED-5449	Fixed issue when moving Doctors Up/Down in the Doctor Display Sequence window they would sometimes get stuck and could not be moved
Office	ZED-5452	Closing the patient details screen in Office using any mechanism other than the Close button (e.g. Find) will no longer erase changes to the Notepad section. Clicking in the Notepad screen will no longer cause Office to prompt to discard changes even if there are none.
Office	ZED-5459	Branch appointment confirmation text can now correctly save the formatting of the text.
Office	ZED-5460	Fixed issue where SMS icons were incorrectly displaying on non-patient appointment slots

Office	ZED-5461	Fixed issue where patients who have been attended past the time period configured for "Long Wait" in Branch options are not highlighted red in the waiting room.
Office	ZED-5466	Enhanced the Edit Archived Patients branch option so that when it is enabled it also allows for an appointment to be booked for an archived patient
Office	ZED-5470	Fixed issue where inactive branches were being incorrectly displayed when setting unavailability for appointments
Office	ZED-5493	Clarified the wording in the message displayed when an invoice is ineligible for claiming via Medicare EasyClaim.
Office	ZED-5765	All requirements that a patient's title has to match their gender have been removed. The title field will now accept any characters up to 4 letters in length.
Office	ZED-5773	Added ability to set a custom invoice footer, replacing the remittance advice section on a per branch basis. The New configuration can be found in Branch Options, in the Edit Texts menu.
Upgrader	ZED-5772	Fix issue where COVID and Flu immunisation data may have the name disappear after an update to Zedmed. No data was lost, just a display issue.
Doctors App	ZED-5581	PIT format results embedded in an HL7 file imported into Clinical now display as expected in the Doctors App
