 - [Version 33.8 \(Reed Warbler\) Zedmed Version 33.8 Release Notes](#)
 - [Version 33.4.1 \(Eastern Osprey\) Zedmed Version 33.4.1 Release Notes](#)
 - [Version 33.3.1 \(Brown Falcon\) Zedmed 33.3.1 Release Notes](#)

System Requirements

For the upgrade to be successful:

1. The .Net Runtime 4.7.2 is required on the server
2. The site (clinic or hospital) must be running on Zedmed Version 26.0 or later.
3. If the clinic is on V28 or prior and uses a Jayex kiosk or HotDoc, additional steps will need to be carried out post-upgrade, update the CRS_App_Server.ini as shown below to switch on the Rest API:

```
[OfficeHIService]  
RunRestService=Yes
```

Once the INI file is updated please restart the Zedmed Office HI service.

4. If the clinic is using MIMS, need to use MIMS January 2021 issue and above.

Release Summary

Version 33.11 Highlights

1. There is now no limit on the number of vaccines that can be transmitted to AIR for a patient.
2. Fixed issue for some customers in Western Australia & Queensland who were getting an error when transmitting an electronic prescription, due to PC software being in a time zone that didn't have any daylight savings times defined.
3. In order to provide enhanced support from Zedmed, an upgraded version of TeamViewer has been implemented. TeamViewer is an application that allows for screen sharing between computers and other internet enabled devices.
4. New MBS incentive item fees added. The functionality has improved the existing process for displaying a Medicare Plus item (an incentive item) for each eligible service item. Specific business rules have been developed for these items. If any problems are encountered with the incentive items popup not displaying, ensure the MBS item has a category, group and sub-group defined.
5. Fixed issue when e prescribing generic medications. Patients were receiving an SMS or email token that showed the brand name, rather than generic name of the drug prescribed.
6. Receipting Batches via Batch Enquiry screen will now correctly update the balance displayed in the Patient Details screen for that Account payer.

Enhancements and Bug Fixes

Component	Key	Release Notes
Office	ZED-6283	AIR Upload - Maximum number of services allowed reached. There is now no limit on the number of vaccines that can be transmitted to AIR for a patient.
Clinical	ZED_6325	Exception when transmitting an electronic prescription. Fixed issue for some customers in Western Australia & Queensland who were getting an error when transmitting an electronic prescription, due to PC software being in a time zone that didn't have any daylight savings times defined.
